

SWEET

SWEET, a European Commission Horizon 2020 funded project, is supported by a consortium of 29 pan-European research, consumer and industry partners, who will develop and review evidence on long term benefits and potential risks involved in switching over to alternate sweeteners and sweetness enhancers (S&SEs) to replace sugars, in the context of public health and safety, obesity, and sustainability.

The five year multidisciplinary project engages stakeholders from across the food chain - consumers, patients, health professionals, scientists, policy makers, and regulators - to address the role of sweeteners in weight control, and potentially move viable products to market.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 774293.
